

## **EI SOLUTIONS TO BUILD SOLAR INSTALLATION FOR SONY PICTURES ENTERTAINMENT**

*235kW rooftop project is part of studio's expansion project*

*Governor Schwarzenegger leads list of dignitaries at studio groundbreaking ceremony*

**PASADENA, CA – SEPTEMBER 21, 2007** – EI Solutions, the systems integration arm of Energy Innovations, Inc., and Sony Pictures Entertainment today announced that the companies will be constructing a pilot solar electricity system at the studio's Culver City, California company headquarters. The planned 235kW installation will be part of an expansion project underway at the historic studio lot in Culver City.

The design phase of the solar system has commenced and installation is scheduled to begin in October 2007 and will be completed in early 2008. The solar panels will be located on the rooftop of the Jimmy Stewart Building and the solar energy generated from the installation will be used to offset electricity needs at the Culver City office facilities.

"In designing the transformation of our studio lot, we wanted to do the right thing for our employees, the community and the environment. I am pleased that we are working with EI Solutions, an experienced leader in this field, to create a solar electricity system as part of the project," said Michael Lynton, Chairman and Chief Executive Officer of Sony Pictures Entertainment.

"We are thrilled to be working with Sony Pictures Entertainment to provide green energy to the studio," said Andrew Beebe, president of EI Solutions. "Solar energy is a great fit for companies like Sony that are committed to embracing energy alternatives that provide sound environmental benefits in an economically sound manner. We look forward to working with Sony Pictures on future initiatives and hope that the studio's leadership will encourage other companies to find ways to use renewable energy."

Governor Schwarzenegger led other local and state officials that joined Sony Pictures today on its Culver City lot for the groundbreaking ceremony of a construction project that includes new office facilities and an employee commons as well as the solar electricity system. The entire project is scheduled to be completed in 2009.

### **About EI Solutions**

EI Solutions is one of California's fastest-growing providers of large-scale solar power systems. The company has completed projects for a wide variety of public agencies and private companies, including the largest solar installation on a US corporate campus, a 1.6 megawatt system on Google's Mountain View headquarters. EI Solutions' headquarters are in San Rafael, California, where all engineering, project management, finance and administrative functions are based. EI Solutions also operates a sales and marketing office in Pasadena, California, at the home of its parent company, Energy Innovations.
